

HIGHWAY 401/ MIDDLESEX ROAD 73 (ELGIN ROAD) INTERCHANGE IMPROVEMENTS

In 2016 MTO completed the Class Environmental Assessment and Preliminary Design for the interchange improvements; documented in the January 2016 Transportation Environmental Study Report (TESR). The TESR received Environmental Clearance in March 2016.

In March 2018, Coco Paving Inc. and Dillon Consulting Limited, initiated the Design-Build project to complete the Detail Design and construction for the Elgin Road Bridge replacement and interchange ramp reconstruction.

The design was completed following MTO's Class Environmental Assessment Process for Provincial Transportation Facilities (2000) as a Group "B" undertaking. Construction is anticipated to begin in early 2019 and be completed the same year. The construction plan includes:

- ▶ Full closure of the Elgin Road Interchange for up to a maximum of four months
- ▶ A signed detour route will be in place during construction
- ▶ The new Elgin Road Bridge and interchange ramps will be constructed on the same alignment as the existing infrastructure.

On behalf of the Ministry of Transportation, Ontario, Coco Paving Inc. and Dillon Consulting Limited are completing the Design-Build Contract to complete the Detailed Design and Construction of:

- Replacement of the Elgin Road Bridge over Highway 401
- Reconstruction of the existing Elgin Road interchange ramps.

A Design and Construction Report (DCR) has been prepared to document environmental impacts and mitigation measures required for construction. The DCR also details the final traffic management plan which was prepared in consultation with local stakeholders including emergency service providers and the Municipality of Thames Centre.

The DCR is available for public review from **November 28, 2018 to January 11, 2019** at the following locations:
